

SmarTrac™ Ultra Long Tracking

Ultra Long Tracking

- Tested to perform up to 150 feet. The SmarTrac™ drive system uses revolutionary technology to optimize plot accuracy.
- The SmarTrac™ uses servo motors that are more accurate and powerful to achieve speed and pull heavy-long plots.
- Loading vinyl is easier than ever.
- Pinchwheels are movable over the entire cutting surface (platen) to handle scraps of any size.
- The red cutting slot in the front of the cutting surface (platen) makes it easy to trim jobs squarely after cutting is finished. Even a standard envelope cutter will nicely trim the vinyl when a job is complete.

Consistant Results

- Weed borders align and sharp corners close even on the most demanding jobs.
