

EGX-300 Features

Bang for the Buck

The EGX-300 combines speed, precision and power in an economical, desktop format. It's perfect for scribing brass for trophies and awards, or cutting light acrylics and plastic for nametags, nameplates and more. It even produces ADA signage.

Compact Performer

The EGX-300's 12-by-9-inch work area, small footprint and enclosed environment allow it to handle a wide range of jobs right from the desktop.

Easy Set-Up and Operation

Simply design your badge, nameplate, or trophy plaque in Letter-Art software. Attach your blank plate onto the EGX-20 engraving bed and press "Output". A joystick on its control panel makes it easy to control the X, Y and Z axes for smooth, accurate engraving.

Compatibility

Engrave and scribe on a wide variety of light duty materials. Compatible materials include coated brass (diamond drag) for great looking trophy plates, as well as dual-coated micro-thin plastics (cutting) for professional badges, nameplates, key rings and luggage tags.

Tools Included

With the EGX-300, users have a variety of tool choices right out of the box. You have the option of using an industry standard 1/8-inch and 11/16-inch tool size, plus the ability to use a diamond drag tool. Additionally, top- and bottom-loading collets support a wide variety of industry standard tool choices..
